Work Experience

AfterShip.com 2019–2021

Automated crawler mapping, eliminating manual work equivalent to 20% of sprint story points; led end-to-end testing to reach 96% coverage.

Python React Node.js AWS Google K8S

Trip.com 2015–2019

Delivered checkout, withdrawal and bank-card features; built frontend monitoring that detected 90% of client-side issues before backend log analysis.

React Native Node.js jQuery Grafana

Kickstart Now OÜ 2025–2026

Developed gameplay and automated localization for a Steam release; built Python/Poco/pytest-bdd tests across languages and resolutions.

Unity Localization Test Automation

Tallinn University Jul 2026

Taught Figma design systems at Tallinn University, guiding students through design tokens, reusable components, prototyping and developer handoff.

Figma Design Systems

Key Skills

Cloud & containers

AWS, GCP, Docker and Google K8S

Automation

CI/CD, translation pipelines and crawler workflows

Reliability

End-to-end testing and frontend monitoring

Linux

Alpine, Arch, Ubuntu and Debian

Education

Tallinn University MSc 2024–2026

Digital Learning Games

Award: National Scholarship for International Students, Education and Youth Board of Estonia (2026)

Universidade Lusófona Jan 2026

Data Science Applied to Geographic Information Systems

Brandenburg University of Applied Sciences

Dec 2025

Interactive Environments

Shenyang University of Technology

BSc 2011–2015

Computer Science

Selected Work

AfterShip.com

Developed courier-data workflows, crawlers and analytics interfaces for AfterShip, connecting data collection with reporting.

Google K8S · AWS · Python

Trip.com

Built checkout, withdrawal and bank-card features, alongside frontend monitoring and tools for testing payment flows.

jQuery · React Native · Node.js

GrowGen.xyz

Built an Astro blog and project lab; reduced SVG previews from up to 1 MB to 10–100 KB.

Astro · ReactJS · Mantine

Missile Command: 3D Multip...

Built a 1v1 Babylon.js game with real-time multiplayer state synchronization through a Colyseus server.

BabylonJS · Colyseus · Node.js

XR Drone Simulator

Built a Unity XR drone simulator with PID control and ML-Agents for my MSc thesis; published on SideQuest.

Unity · MRTK · PID Control

Tallinn University XR Tour

Built a browser-based campus tour with captured 3D scenes and XR teleportation; tested on Quest 3.

BabylonJS · 3DGS

Grandpa's Bee Haven

Developed gameplay, localization and automated tests for an award-winning Unity game released on Steam.

Award: BEST GAMEPLAY, Estonian Game Dev Guild Awards 2026

Unity · Localization

Baltic Kitchen Kaos

Programmed cooking gameplay and experimental hand tracking, bridging browser-based MediaPipe to Unity through JavaScript.

Unity · ReactJS · MediaPipe

Tetris AI

Modernized Pixtris to PixiJS 8 and TypeScript, adding a minimax opponent for competitive play.

PixiJS · Minimax
